

Immunizations During an Outbreak

Summary

BOR policy on administering and maintaining immunization status during an outbreak.
CSU ascribes directly to BOR policy on health management of private information

Purpose

To provide guidance on BOR policy on administering and maintaining immunization status during an outbreak.

Policy

4.8 Immunizations

4.8.1 Immunizations Against Disease During an Outbreak/Epidemic

(Last Modified on June 29, 2009)

During an epidemic or a threatened epidemic of any disease preventable by immunization at a USG institution, and when an emergency has been declared by appropriate health authorities of this state, the president of that institution is authorized, in conjunction with the Chancellor and appropriate health authorities, to promulgate rules and regulations specifying those diseases against which immunizations may be required.

Any individual who cannot show proof of immunity or adequate immunization and refuses to be immunized shall be excluded from any USG institution or facility until such time as he/she presents valid evidence that he/she is immunized against the disease or the epidemic or threat no longer constitutes a significant public health danger (BoR Minutes, 1989-90, p. 406).
